**Samråd enligt artikel 4-5 Esbokonventionen gällande livstidsförlängning av kärnkraftreaktorerna Doel 4 och Tihange 3 i Belgien Ärende nr NV-07077-22**

**Public consultation on the life extension for Doel 4 and Tihange 3 nuclear reactors**

The federal government of Belgium has approved a preliminary draft of April 1<sup>st</sup> 2022 aimed at amending the law of January 2003 on a gradual exit from nuclear energy for industrial electric power generation.

The preliminary proposal at hand aims at authorizing the activation of reactors Doel 4 and Tihange 3 for further 10 years of operation, taking into account proper results of environmental impact assessment in every international respect.

The Swedish nonprofit association *Environmentalists for Nuclear Power, MFK*, has got the opportunity to react on this preliminary law draft. This is our opinion and statement:

There is a worldwide consensus that well-kept nuclear power plants have a life time span of up to 80 years of operation. It is extremely vital to keep national and European electric power support and security in the best possible way in every respect. A step in this direction is to support the spirit of this 1<sup>st</sup> April law draft.

Best regards  
Carl Erik Magnusson  
chairman MFK
